

Question:

Toulouse has twice as many sheep as Charleston. Charleston has 4 times as many sheep as Seattle. How many sheep do Toulouse, Charleston, and Seattle have together if Seattle has 20 sheep?

Reasoning + Answer:

<think>First let's determine the number of sheep in Charleston. We know that Charleston has 4 times as many sheep as Seattle. Given that Seattle has 20 sheep. Therefore Charleston has $4 * 20 = 80$ sheep. Now let's determine the number of sheep in Toulouse. We know that Toulouse has twice as many sheep as Charleston. Given that Charleston has 80 sheep. Therefore Toulouse has $2 * 80 = 160$ sheep. Now let's calculate the total number of sheep in Toulouse, Charleston, and Seattle. Toulouse has 160 sheep. Charleston has 80 sheep. Seattle has 20 sheep. Therefore in total Toulouse, Charleston, and Seattle have $160 + 80 + 20 = 260$ sheep. Therefore 260 sheep in total. </think><answer>260</answer>
