

Question:

Jill gets paid \$20 per hour to teach and \$30 to be a cheerleading coach. If she works 50 weeks a year, 35 hours a week as a teacher and 15 hours a week as a coach, what's her annual salary?

Reasoning + Answer:

<think>First let's calculate how much Jill earns per week as a teacher. She works 35 hours a week as a teacher and gets paid 20 dollars per hour. $35 * 20 = 700$ dollars per week. Now let's calculate how much she earns per week as a coach. She works 15 hours a week as a coach and gets paid 30 dollars per hour. $15 * 30 = 450$ dollars per week. Now let's calculate her total weekly earnings. She earns 700 dollars as a teacher and 450 dollars as a coach. $700 + 450 = 1150$ dollars per week. Now let's calculate her annual salary. She works 50 weeks a year. $1150 * 50 = 57500$ dollars per year. Therefore her annual salary is 57500 dollars. </think><answer>57500</answer>
