

Question:

Neurotoxin is which snake -Answer Choices:A. ViperB. KraitC. Sea snakeD. None

Reasoning + Answer:

<think>The neurotoxin is a type of venom that affects the nervous system of its victim. Among the options given, the Krait is a type of snake that is known to produce neurotoxin venom. The venom of the Krait is a potent neurotoxin that can cause respiratory failure, paralysis, and even death. The other options, Viper and Sea snake, produce hemotoxin venom that affects the blood and muscles, rather than neurotoxin. Therefore, the correct answer is the Krait. </think> <answer> B. Krait </answer>
