

**Question:**  
Verocay bodies are seen in  
Answer Choices:  
A. Meningioma  
B. Hemangioma  
C. Glioma  
D. Shwannoma

**Reasoning + Answer:**

<think>

To determine the correct answer , let 's analyze the options given and their association with Verocay bodies .

Verocay bodies are a characteristic histopathological feature . They are seen in a specific type of tumor . The correct option is associated with a type of tumor that is known to have Verocay bodies .

A. Meningioma : Meningiomas are typically benign tumors arising from the meninges , the protective membranes surrounding the brain and spinal cord . Verocay bodies are indeed a feature of meningiomas , particularly in the psammomatous type .

B. Hemangioma : Hemangiomas are benign vascular tumors composed of blood vessels . While they have distinct histological features , Verocay bodies are not typically associated with hemangiomas .

C. Glioma : Gliomas are primary brain tumors arising from the glial cells . Verocay bodies are not characteristic of gliomas .

D. Shwannoma : Shwannomas are benign tumors arising from Schwann cells , which are responsible for the myelination of nerve fibers . Verocay bodies are not typically associated with shwannomas .

Considering the options , meningiomas are the tumors most commonly associated with Verocay bodies .
