

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think>

To determine the correct answer, we need to understand the Glasgow Coma Scale (GCS), which is a neurological scale used to assess the level of consciousness in a person following a head injury or other medical condition. The GCS evaluates three components: eye opening, verbal response, and motor response. Each component is scored from 1 to 4 or 6, depending on the severity of the response.

The minimum score is achieved when a patient is unresponsive and has no eye opening, no verbal response, and no motor response, which would be a score of 1 for each component. This would give a total minimum score of 3 (1 + 1 + 1).

The maximum score is achieved when a patient is fully awake and alert, has a normal eye opening, speaks normally, and has a normal motor response, which would give a score of 4 for each component. This would give a total maximum score of 12 (4 + 4 + 4), but some sources state the maximum score is 15.
