

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think>

To determine the minimum and maximum possible values of the Glasgow Coma Score (GCS), we need to understand how the GCS is calculated . The GCS is a neurological scale used to assess the level of consciousness in a person following a head injury . It is composed of three components : Eye Opening (E), Verbal Response (V), and Motor Response (M).

Each component is scored separately , with the total GCS being the sum of the scores of the three components . The scores for each component are as follows :

- Eye Opening : 1 - 4 (4 being the highest)
- Verbal Response : 1 - 5 (5 being the highest)
- Motor Response : 1 - 6 (6 being the highest)

Given these scoring systems , the minimum possible score for each component is 1 (Eye Opening), 1 (Verbal Response), and 1 (Motor Response), respectively . Therefore , the minimum total GCS score would be $1 + 1 + 1 = 3$.

The maximum possible score for each component is 4 (Eye Opening), 5 (Verbal Response), and 6 (Motor Response). Thus , the maximum total GCS score would be $4 + 5 + 6 = 15$.

</think>

<answer>

A . Minimum = 3 , Maximum = 15

</answer>
