

Question:
What are the minimum and maximum possible values of Glasgow Coma Score?

- Answer Choices:
- A. Minimum = 3, Maximum = 15
 - B. Minimum = 0, Maximum = 13
 - C. Minimum = 0, Maximum = 15
 - D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think>
To determine the minimum and maximum possible values of the Glasgow Coma Score (GCS), we need to understand its components. The GCS is a neurological scale used to assess the level of consciousness in a patient. It is composed of three parts: Eye Opening, Verbal Response, and Motor Response. Each part is scored separately.

The Eye Opening component has three possible scores: 1 (no response), 2 (to verbal command), and 3 (spontaneously opens). The Verbal Response component has five possible scores: 1 (no response), 2 (incomprehensible sounds), 3 (inappropriate words), 4 (disoriented), and 5 (oriented). The Motor Response component also has five possible scores: 1 (no response), 2 (abnormal flexion), 3 (abnormal extension), 4 (flexion), and 5 (obeys commands).

To find the minimum possible value, we need to assign the lowest score to each component. This would be 1 (no response) for Eye Opening, 1 (no response) for Verbal Response, and 1 (no response) for Motor Response. The sum of these scores would be $1 + 1 + 1 = 3$.

To find the maximum possible value, we need to assign the highest score to each component. This would be 3 (spontaneously opens) for Eye Opening, 5 (oriented) for Verbal Response, and 5 (obeys commands) for Motor Response. The sum of these scores would be $3 + 5 + 5 = 13$.

Therefore, the minimum possible value of the GCS is 3 and the maximum possible value is 13.

</think>
<answer>
B. Minimum = 0, Maximum = 13
</answer>
