

Question:
Bivalent meningococcal vaccine is ?
Answer Choices:
A. A Y
B. A C
C. C y
D. A W-135

Reasoning + Answer:

<think>
To answer this question , we need to identify the correct combination of meningococcal serogroups covered by the bivalent meningococcal vaccine . The bivalent meningococcal vaccine typically covers two serogroups : A and W - 135 . This vaccine is often recommended for individuals who are at high risk of invasive meningococcal disease , such as those traveling to areas where the disease is common or those with certain medical conditions .

Considering the options provided , we can see that option D , "A W - 135 ," matches the typical composition of a bivalent meningococcal vaccine .

Therefore , the correct answer is the one that includes both A and W - 135 serogroups .
