

Question:
Bivalent meningococcal vaccine is ?
Answer Choices:

- A. A Y
- B. A C
- C. C y
- D. A W-I35

Reasoning + Answer:

The bivalent meningococcal vaccine typically targets two serogroups of Neisseria meningitidis, usually serogroups A and C. This combination vaccine is designed to protect against these two common serogroups causing meningococcal disease.

Given the answer choices provided, the correct combination would be:

- A (for serogroup A)
- C (for serogroup C)

Thus, the correct answer is:

A. A C

<answer>
A. A C
</answer>
