

Question:
Lymphatic drainage of ovary?
Answer Choices:
A. Deep inguinal
B. Superficial inguinal
C. Obturator
D. Paraaortic

Reasoning + Answer:

- <think>
- The ovary is located in the pelvic cavity , and lymphatic drainage from the ovaries typically follows the course of blood supply and anatomical structures .
 - The ovarian blood supply is via the ovarian arteries , which arise from the abdominal aorta and run alongside the ovarian veins .
 - The lymphatics from the ovary drain into the retroperitoneal lymph nodes , which are part of the para-aortic lymphatic system .
 - The lymph nodes in the pelvis and around the aorta are known as the para-aortic lymph nodes .
 - Therefore , the lymphatic drainage of the ovary is primarily into the para-aortic lymph nodes .

Based on this reasoning , the correct answer is :

</think>
<answer>
D . Paraaortic
</answer>
