

Question:
White infracts are seen in which of the following
Answer Choices:
A. Kidney
B. Spleen
C. Hea
D. All the above

Reasoning + Answer:

<think>
White infarcts are typically seen in organs with a dual blood supply , where one artery can become occluded while the other maintains blood flow , preventing the entire organ from being deprived of oxygen and nutrients . The spleen and kidney are such organs , as they have dual blood supplies from the renal arteries and splenic arteries , respectively . The heart , on the other hand , does not have a dual blood supply ; it is supplied by the coronary arteries which arise directly from the aorta .
Therefore , the heart does not typically present with white infarcts because it lacks the dual blood supply necessary to allow for partial occlusion without complete ischemia .

Given this reasoning , we can conclude that white infarcts are seen in the kidney and spleen , but not in the heart .
