

Question:
Bivalent meningococcal vaccine is ?
Answer Choices:
A. A Y
B. A C
C. C y
D. A W-I35

Reasoning + Answer:

<think>
To determine the correct answer , we need to understand the composition of bivalent meningococcal vaccines .

1. ****Y and W-135****: These are serogroups of Neisseria meningitidis (meningococcus) that are targeted by the vaccine . The term "bivalent" means that the vaccine targets two serogroups .
2. ****A and C****: These are also serogroups of Neisseria meningitidis , but they are not the ones targeted by a bivalent vaccine . A trivalent vaccine would target these three serogroups (A , C , and either W-135 or Y).

- Given the options :
- A Y: This would imply a vaccine targeting serogroup Y and something else , which is not a bivalent vaccine .
 - A C: This would imply a vaccine targeting serogroup A and C , which is not a bivalent vaccine .
 - C y: This would imply a vaccine targeting serogroup C and Y , which is a bivalent vaccine .
 - A W-I35: This would imply a vaccine targeting serogroup A and W-135 , which is not a bivalent vaccine .

The correct bivalent vaccine targets serogroups C and Y.
