

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>Janet's ducks lay 16 eggs per day. She eats 3 eggs for breakfast, so the number of eggs left after breakfast is : $[16 - 3 = 13 \text{ eggs}]$ She bakes muffins for her friends with 4 eggs, so the number of eggs left after baking is : $[13 - 4 = 9 \text{ eggs}]$ Thus, the number of eggs she sells at the farmers' market daily is 9 eggs. Since she sells the remainder at the farmers' market for \$2 per fresh duck egg, the amount of money she makes every day is : $[9 \times 2 = 18 \text{ dollars}]$ </think><answer>18</answer>
