

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>Josh buys a house for \$80,000 and puts in \$50,000 in repairs, so the total cost he invested is: $\text{\[\$80,000 + \$50,000 = \$130,000 \text{ dollars} \]}$ The value of the house increased by 150%, so the increase in value is: $\text{\[\$130,000 \times \frac{150}{100} = \$195,000 \text{ dollars} \]}$ Thus, the new value of the house is: $\text{\[\$80,000 + \$195,000 = \$275,000 \text{ dollars} \]}$ The profit Josh made is the difference between the new value of the house and the total cost he invested: $\text{\[\$275,000 - \$130,000 = \$145,000 \text{ dollars} \]}$ </think><answer>145000</answer>
