

Question:

Leah just got a new kitten. Spaying her cost \$200, her 3 vaccines costs \$20 each, and the kitten broke 4 vases that cost \$12 each. How much has the kitten cost so far?

Reasoning + Answer:

<think>She got spayed for 200, 3 vaccines at 20 so $3 * 20 = 60$. The vases were 4 at 12 so $4 * 12 = 48$. $200 + 60 + 48 = 308$, so the kitten has cost 308. </think><answer>308</answer>

Reward score
