

Question:

Carolyn works for a delivery service company that hires on a contract basis. In May, they hired 40 employees, paying each employee \$15 per hour for a 40-hour workweek. In June, 1/4 of the employees' contracts expired. Calculate the total amount of money the company paid to the employees in the two months.

Reasoning + Answer:

<think> They hired 40, so 1 / 4 of 40 is $40 / 4 = 10$. So 10 left and $40 - 10 = 30$ stayed.
.
 $30 * 40 = 1200$. They pay 15 so $1200 * 15 = 18000$. The answer is 18000.
