

Question:

Bryce and four of his friends each ordered their own pizzas after football practice. Each pizza had 12 slices. Bryce and two friends ate $\frac{2}{3}$ of their pizzas. The two remaining friends ate $\frac{3}{4}$ of their pizzas. How many slices of pizza were left?

Reasoning + Answer:

<think> They had 5 total and they ate $\frac{2}{3}$ of 12 so $\frac{2}{3} * 12 = 8$. So $12 - 8 = 4$ left. The other 2 friends had $\frac{3}{4}$ of 12 so $\frac{3}{4} * 12 = 9$. So $4 - 9 = 5$. So 5 of the slices were left. The answer is 5.
