

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think> First, we first find out how many meters she runs in one week, Since he runs 3 sprints a time, So, 3 sprints a time * 60 meters = 180 meters, He runs 180 meters 3 times a week, So, 180 meters * 3 = 540 meters, </think><answer> 540</answer>
