

Question:

Kyle bought last year's best-selling book for \$19.50. This is with a 25% discount from the original price. What was the original price of the book?

Reasoning + Answer:

<think> First, I will find out 100% premium, First I will find 100% premium = 100
Now, to find 25% of 100, I will multiply 100 by 0.25, So, 25% of 100 = 100 * 0.25 = 25, Now, I am going to subtract the discount from the premium, So, original price = 100 - 25 = 75, </think> <answer> 75 </answer>
