

Question:

Mark took a test yesterday that consisted of 75 questions. He completed the test at a rate of 5 questions per hour. Today, he took another test of 100 questions at the same rate. If Mark had 8 hours to complete the first test and 6 hours to complete the second one, how many questions did he leave incomplete?

Reasoning + Answer:

<think>He completed $5 * 8 = 40$ He completed $5 * 6 = 30$ He left $75 - 40 = 35$ incomplete
and $100 - 30 = 70$ incomplete so in total he left $35 + 70 = 105$ incomplete <answer>105</
answer>
