

Question:

Rayna has 60 more dollars than Kassidy, and Kassidy has $\frac{3}{4}$ times as much money as Aurelia. If Aurelia has \$120, how much would each have if they decided to add together their money and share equally among them?

Reasoning + Answer:

<think> Aurelia has 120 Kassidy has $\frac{3}{4}$ of 120 which is $3 * 30 = 90$ Rayna has 60 more than 90 so $90 + 60 = 150$ total is $120 + 90 + 150 = 360$ $360 / 3 = 120$ <answer> 120 <answer>
