

Question:

Maddy is buying pizza for her cousin's soccer game. There are 12 team members and 3 coaches. Each team member brings 2 guests. A pizza will serve 3 people. If each pizza costs \$15, how many dollars will Maddy spend?

Reasoning + Answer:

There are $12 + 3 = 15$ team members and guests. They need $15 + 2 * 15 = 45$ people worth of pizza. This will require $45 / 3 = 15$ pizzas. This will cost $15 * 15 = \$225$
