

Question:

It rained 2 inches on Monday and is expected to rain 1 more inch than twice of Monday's total on Tuesday. How many inches of rain will there be on Tuesday?

Reasoning + Answer:

<think so first you need to find out how many inches it rained on monday. so if it rained 2 inches on monday you do 2 inches. now you need to do $2 * 2$ cause it said twice of monday's total. so $2 * 2 = 4$. so now you know monday was 2 and twice of that is 4. so now you do 4 and you said it's going to rain 1 more inch. so you do $4 + 1$. so $4 + 1$ is 5. so i did think $2 * 2$ cause it said twice as much as monday so i did $2 * 2$ and then i did $4 + 1$ cause it said they're going to have 1 more inch. so the answer is 5. so i did $4 + 1$. so i did $4 + 1$ because it's 1 more than the previous day. so the answer is 5. so i think the answer is 5. so i'll put it in the answer box <answer> 5 </answer>
