

Question:

A crocodile grows 8 inches long in 4 years. At this rate, how many inches will it grow in 13 years?

Reasoning + Answer:

<think so first you need to find out the growth per year . so you do 8 inches / 4 years . 8 / 4 = 2 . so it grows 2 inches per year . now you know it grows 2 inches in 1 year . so to find out how many inches it grows in 13 years . you do 2 * 13 . so 2 * 13 . 2 * 13 = 26 . so i did 2 * 13 . so the answer is 26 inches . so i 'll say . so i 'll say the answer is 26 inches . so i think the crocodile will grow 26 inches in 13 years . so i 'll do this . so i 'll do so the answer is 26 . so i 'll put it in answer format . so i 'll do <answer> 26 </answer>
