

Question:

Jane has saved \$4 of her allowance every week for the past 8 weeks. If she continues to save the same amount each week, how many more weeks will it take for her to have saved a total of \$60?

Reasoning + Answer:

<think so first you need to find out how much she saved in 8 weeks. so you do $4 * 8$ cause she saves 4 each week for 8 weeks. so $4 * 8 = 32$. so she saved 32. now you know she saved 32 so you do 60 cause that's what you want to reach and 32 cause that's what she has. so $60 - 32$. so now you do $60 - 32 = 28$. so she has 28 left to reach 60. now since she saves 4 each week you do $28 * x$ cause you want to find out how many weeks. so now it's $28 * x = 28$. so you do $28 / 28$ to solve for x. so $28 / 28 = 1$. so she would need 1 more week. so the answer is 1. so i did $28 / 28$ and i got 1. so i know she needs 1 more week. so i say the answer is 1. so i'll put the answer like this. so i'll say the answer is 1 more week. so i'll put it in the answer format. so i do think the answer is 1 more week. so i'll do answer 1 more week. so i get this. so i do think the answer is 1 more week. so i'll do answer 1 more week. so i get this. so i do think the answer is 1 more week. so the answer is 1 more week.
