

Question:

For every muffin, Svetlana needed 5 tablespoons of flour, 3 tablespoons of sugar, and 0.25 of a tablespoon of salt. How many tablespoons of dry ingredients would Svetlana need to make 16 muffins?

Reasoning + Answer:

<think so first you need to find out how much flour she needs. so you do 5 tablespoons of flour * 16 because she's making 16 muffins. so 5 * 16 = 80. so she needs 80 tablespoons of flour. now for the sugar. you do 3 tablespoons * 16 causes same as flour. so 3 * 16 = 48. so she needs 48 tablespoons of sugar. now for the salt. you have 0.25 of a tablespoon and you do 0.25 * 16. so 0.25 * 16. 0.25 * 16 is 4. so she needs 4 tablespoons of salt. so now you do 80 for flour + 48 for sugar + 4 for salt. 80 + 48 + 4. so 80 + 48 is 128. 128 + 4 is 132. so the answer is 132. so i did think out loud to make it easy to understand. so i hope this helps. so the answer is 132. so Svetlana would need 132 tablespoons of dry ingredients. so i wrote 132 as the answer. so i hope this helps you.
