

Question:
A raspberry bush has 6 clusters of 20 fruit each and 67 individual fruit scattered across the bush. How many raspberries are there total?

Reasoning + Answer:
To solve this problem, please follow the steps below: <think> 1. There are 6 clusters with 20 fruit each, so the total number of clustered berries is $6 * 20 = 120$. In addition to these, there are 67 berries on the bush individually. Therefore, the total number of raspberries is $120 + 67 = 187$. So, there are 187 raspberries in total. </think>

Question:
A raspberry bush has 6 clusters of 20 fruit each and 67 individual fruit scattered across the bush. How many raspberries are there total?

Reasoning + Answer:
To solve this problem, please follow the steps below: <think> 1. There are 6 clusters with 20 fruit each, so the total number of clustered berries is $6 * 20 = 120$. In addition to these, there are 67 berries on the bush individually. Therefore, the total number of raspberries is $120 + 67 = 187$. So, there are 187 raspberries in total. </think>
