

**Question:**

A dance studio offers lessons to students. It costs \$25 per session to rent the studio plus \$1.50 per student per session. At present, the dance studio has 10 students and is rented 3 days a week. How much are the expected earnings of the dance studio in a month?

**Reasoning + Answer:**

<think>The total cost to rent the studio for 3 days is  $25 \times 3 = 75$  dollars<br>The cost for 10 students for 3 days is  $10 \times 1.5 \times 3 = 45$  dollars<br>So, the total cost for each day is  $75 + 45 = 120$  dollars<br>Since the studio is rented 3 days a week, the total cost for a week is  $120 \times 3 = 360$  dollars<br>Assuming there are 4 weeks in a month, the expected earnings of the dance studio in a month are  $360 \times 4 = 1440$  dollars<br></think><answer>1440</answer>
