

Question:

44 seniors need to receive awards. Each senior receives a picture frame that costs \$20. Each picture frame needs to be etched with the logo for an additional 20% cost per frame. 2 of the seniors will also receive pins that are \$5. 1/4 of the seniors are officers and they will need to receive cords that are \$12 each. How much will be spent on the senior gifts?

Reasoning + Answer:

<think>The cost for 44 seniors to receive a picture frame is : $[44 \times 20 = 880 \text{ \text{\text{dollars}}}]$ The additional cost to etch the logo for each frame is 20% of \$20 : $[20 \times \frac{20}{100} = 4 \text{ \text{dollars per frame}}]$ Thus , the additional cost for etching the logos for all 44 frames is : $[44 \times 4 = 176 \text{ \text{dollars}}]$ The cost for 2 seniors to receive pins is : $[2 \times 5 = 10 \text{ \text{dollars}}]$ The cost for the cords for the officers (which is 1 / 4 of the seniors) : $[\frac{1}{4} \times 44 = 11 \text{ \text{seniors}}]$ Thus , the cost for the cords is : $[11 \times 12 = 132 \text{ \text{dollars}}]$ Therefore , the total amount spent on the senior gifts is : $[880 + 176 + 10 + 132 = 1218 \text{ \text{dollars}}]$ </think><answer>1218</answer>
