

Question:

There are 36 penguins sunbathing in the snow. One-third of them jump in and swim in the ocean. Another one-third go inside the cave to eat their dinner. How many penguins are still left sunbathing?

Reasoning + Answer:

<think> 36 / 3 = 12 penguins jumped in ocean , 36 / 3 = 12 penguins went to cave . So 36 - 12 - 12 = 12 penguins still sunbathing . <answer> 12 </answer>
