

Question:

Audrey has to take two math tests to pass 6th grade. She must correctly answer 70% of the total questions to move on to the 7th grade. The first test has 70 questions and she gets 60% of them correct. The second test has 40 questions. How many questions does she need to get right on the second test to move onto the 7th grade?

Reasoning + Answer:

<think>Firsttestcorrect= $70 * 60\% = 42$. Totalquestions= $70 + 40 = 110$. Totalcorrectfor
 $70\% = 110 * 70\% = 77$. Alreadygot= 42 , soneeds $77 - 42 = 35$ moreon 2ndtest. <
answer>35</answer>
