

Question:

Johnny's dad brought him to watch some horse racing and his dad bet money. On the first race, he lost \$5. On the second race, he won \$1 more than twice the amount he previously lost. On the third race, he lost 1.5 times as much as he won in the second race. How much did he lose on average that day?

Reasoning + Answer:

<think>First race loss = \$5. Second race win = $1 + 2 * 5 = \$11$. Third race loss = $1.5 * 11 = \$16.5$. Total loss = $5 + 16.5 - 11 = \$9.5$. Number of races = 3. Average loss = $9.5 / 3 = \$3.17$. <answer>3.17</answer>
