

Question:

A farmer is baling hay in their field. Each hour the farmer makes 5 bales. At the same time, a truck is picking the hay bales up. Each hour the truck picks up 3 bales of hay. If the farmer and the truck driver put in a 6 hour day, how many bales of hay are left in the field?

Reasoning + Answer:

<think>They farmer makes 5 bales per hour and the day is 6 hours so $5 \times 6 = 30$ bales
The truck picks up 3 bales per hour and the day is 6 hours so $3 \times 6 = 18$ bales They picked
up 18 bales and the farmer made 30 bales so $30 - 18 = 12$ bales left </think><
answer>12</answer>
