

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
150 % of 800 00 is 150 / 100 * 800 00 = 120 000
The value of the house after repairs is 800 00 + 120 000 = 200 000
He spent 500 00 on repairs
So he sold the house for 200 000 - 500 00 = 150 000
The profit he made is 150 000 - 800 00 = 700 00
</think>
<answer> 700 00 </answer>
