

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
Original cost of the house = \$80,000
Josh puts in \$50,000 for repairs
Total cost = \$80,000 + \$50,000 = \$130,000
The house value increases by 150%, meaning the new value is 2.5 times the original cost
New value = \$80,000 * 2.5 = \$200,000
Profit = New value - Total cost = \$200,000 - \$130,000 = \$70,000
</think><answer>70000</answer>
