

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think>
Number of chickens in Wendi's flock = 20
Feed given in the morning = 15 cups
Feed given in the afternoon = 25 cups
Total feed given so far = 15 + 25 = 40 cups
Since Wendi feeds each chicken 3 cups of feed , total feed needed for 20 chickens = 20 * 3 = 60 cups
Feed left to be given in the final meal = 60 - 40 = 20 cups
</think><answer> 20 </answer>
