

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
Cost of one glass = \$ 5
Cost of every second glass = 60 % of \$ 5 = 0 . 6 * \$ 5 = \$ 3
Total number of glasses Kylar wants to buy = 16
Number of glasses where the price is \$ 5 = 16 / 2 = 8
Number of glasses where the price is \$ 3 = 16 - 8 = 8
Total cost = (8 * \$ 5) + (8 * \$ 3) = \$ 40 + \$ 24 = \$ 64
</think>< answer > 64 </answer>
