

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
Number of eggs laid by Janet's ducks per day = 16
She eats 3 eggs for breakfast every morning
Number of eggs left after breakfast = $16 - 3 = 13$
She bakes muffins with 4 eggs , so she bakes $13 / 4 = 3.25$ (round down to 3 since you can't bake a fraction of a muffin)
Number of eggs left after baking = $13 - 3 = 10$
She sells the remaining 10 eggs at the farmers ' market at \$ 2 per egg
Total money made at the farmers ' market = $10 * 2 = 20$
</think><answer> 20 </answer>
