

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
Original cost price of the house = \$ 80 , 000
Josh puts in \$ 50 , 000 for repairs
Total cost incurred by Josh = \$ 80 , 000 + \$ 50 , 000 = \$ 130 , 000
Let's assume the original value of the house is x
After repairs , the value of the house becomes 2 . 5 x (150 % more than the original value)
Since the total cost incurred by Josh is \$ 130 , 000 , we can set up the equation :
 $2.5x = 130,000$
 $x = 130,000 / 2.5$
 $x = 52,000$
So , the original value of the house was \$ 52 , 000
Profit made by Josh = Selling price - Cost price
 $= 2.5x - 130,000$
 $= 2.5(52,000) - 130,000$
 $= 130,000 - 130,000$
 $= 0$
</think><answer> 0 </answer>
