

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think>
Number of chickens = 20
Feed per chicken per meal = 3 cups
Morning feed = 15 cups
Afternoon feed = 25 cups
Total feed so far = 15 + 25 = 40 cups
Since each chicken gets 3 cups of feed , total feed required = Total chickens * Feed per chicken
= 20 * 3
= 60 cups
So , Wendi needs to give her chickens 60 cups of feed in the final meal of the day .
</think>< answer> 60 </answer>
