

Question:

Eliza's rate per hour for the first 40 hours she works each week is \$10. She also receives an overtime pay of 1.2 times her regular hourly rate. If Eliza worked for 45 hours this week, how much are her earnings for this week?

Reasoning + Answer:

<think>
She earns 10 dollars per hour for the first 40 hours
She earns $10 * 40 = 400$ dollars for the first 40 hours
She worked 45 hours in total , so she worked $45 - 40 = 5$ hours overtime
Her overtime pay is 1.2 times her regular rate , so $10 * 1.2 = 12$ dollars per hour for overtime
She earned $12 * 5 = 60$ dollars for overtime
Her total earnings are $400 + 60 = 460$ dollars
</think>
<answer> 460 </answer>
