

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

He runs 3 sprints a day and 3 days a week, so that is $3 * 3 = 9$ sprints per week

Each sprint is 60 meters, so $9 * 60 = 540$ meters per week

</think>

<answer>

540 meters </answer>
