

Question:

Eliza's rate per hour for the first 40 hours she works each week is \$10. She also receives an overtime pay of 1.2 times her regular hourly rate. If Eliza worked for 45 hours this week, how much are her earnings for this week?

Reasoning + Answer:

<think>
She earns 10 dollars per hour for the first 40 hours
For the remaining 5 hours she earns $1.2 * 10 = 12$ dollars per hour
So , her earnings for the remaining 5 hours are $5 * 12 = 60$ dollars
Her total earnings for the week are $40 * 10 + 60 = 400$ dollars
</think>
<answer> 400 dollars </answer>
