

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
To solve this problem , we first need to find out how many eggs Janet has left after eating three for breakfast and baking four for her friends . Since she lays 16 eggs per day , we can subtract the number of eggs she eats for breakfast and bakes for her friends from the total number of eggs laid . $\text{eggs_left} = 16 - 3 - 4 = 9$. Then , we need to multiply the number of eggs left by the price per egg to find the total amount of money Janet makes at the farmers ' market . $\text{money_made} = \text{eggs_left} * 2 = 9 * 2 = 18$.
</think><answer> 18 </answer>
