

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think> Okay , let's break down the problem . Josh buys a house for \$ 80 , 000 and puts in \$ 50 , 000 in repairs , so the total cost price of the house is $\$80,000 + \$50,000 = \$130,000$. The value of the house increased by 150 % after the repairs . To find the new value , we need to calculate 150 % of the original value and add it to the original value . 150 % of \$ 80 , 000 is $1.5 * \$80,000 = \$120,000$. So , the new value of the house is $\$80,000 + \$120,000 = \$200,000$. To find the profit , we subtract the total cost price from the new value : $\$200,000 - \$130,000 = \$70,000$. So , Josh made a profit of \$ 70 , 000 .</think><answer> 700 00 </answer>
