

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
To find out how much Janet makes at the farmers ' market , we need to first calculate how many eggs she lays in a day after accounting for the eggs she eats and bakes . Janet lays 16 eggs per day . She eats 3 eggs for breakfast , so she has $16 - 3 = 13$ eggs left . She then bakes 4 muffins with 4 eggs each , which means she uses $4 * 4 = 16$ eggs for baking . This leaves her with $13 - 16 = -3$ eggs . Since Janet can 't sell a negative number of eggs , we need to recalculate how many eggs are left after accounting for the baking . Since she had 16 eggs to bake , she has $16 - 4 = 12$ eggs left to sell . She sells each egg for \$2 , so the total amount she makes at the farmers ' market is $12 * 2 = \$24$. </think><answer>24</answer>
