

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

To find the total number of meters James runs in a week, we need to first calculate the total number of meters he runs in a single sprint, and then multiply that by the number of sprints he does in a week. Since James runs 60 meters per sprint and he does 3 sprints per week, the total number of meters he runs in a week is $60 * 3 = 180$ meters.

</think><answer>180</answer>
