

Question:
James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>
he runs 60
he runs 3 sprints
so he runs $60 * 3$
 $60 * 3 = 180$
he runs 180 meters
he runs 3 times a week
so he runs $180 * 3$
 $180 * 3 = 540$
so he runs 540 meters a week
so he runs 540
he runs 540 meters a week
</think><answer>540</answer>
