

Question:

John drives for 3 hours at a speed of 60 mph and then turns around because he realizes he forgot something very important at home. He tries to get home in 4 hours but spends the first 2 hours in standstill traffic. He spends the next half-hour driving at a speed of 30mph, before being able to drive the remaining time of the 4 hours going at 80 mph. How far is he from home at the end of those 4 hours?

Reasoning + Answer:

<think>
he drove $3 * 60 = 180$
so he is 180 miles away from home
he spends 2 hours in stand still traffic
he drives $0.5 * 30 = 15$
he drives $4 - 2 - 0.5 = 1.5$ hours at 80
he drives $1.5 * 80 = 120$
he drives $180 - 15 = 165$
he drives $165 - 120 = 45$
he is 45 miles away from home
</think><answer>45</answer>
