

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>
he runs 60
he runs 3 sprints
so he runs 60×3
 $60 \times 3 = 180$
so he runs 180 meters per day
he runs 3 days a week
so he runs 180×3
 $180 \times 3 = 540$
so he runs 540 meters per week
he runs 3 times a week
so he runs 540×3
 $540 \times 3 = 1620$
so he runs 1620 meters per week
he runs 1620 meters per week
so he runs 1620
he runs 1620 meters per week
</think><answer>1620</answer>
